

PKFO

A versatile sanding tool for most types of wood.

It is difficult to find an effective sanding tool for furniture and joinery manufacturers, which will excel on both solid wood as well as veneer applications. For these sanding applications, Ekamant has PKFO, which combines the capacity for high rates of stock removal with the ability to produce excellent surface finishes.

- To get the best result from the sharpness of PKFO, comparatively low sanding pressure should be used. This will give minimal fibre rise, a more even stain, with potentially less lacquer consumption, and easier intermediate lacquer sanding.
- The bond system together with open coat grit distribution reduces clogging to a minimum, and contributes to the best possible sanded finish.
- As for all Ekamant sanding products, an excellent surface finish is a characteristic of PKFO.

Backing material	F-paper
Type of grains	Aluminium Oxide
Coating	Open
Binder	Resin over glue
Antistatic treatment	No
Stearated	No

Item	standard
Narrow belts	Yes
Wide belts	Yes
Rolls	Yes
Discs	Yes
Sheets	No
