

ARSFEO

A sanding tool for the most demanding applications.

Woods such as pine or spruce with a high resin content, not only tend to clog, but are often 'knotty' and vary in hardness across the workpiece. To produce not just an excellent final surface, but also one that is uniform, requires an especially high quality sanding tool. For this sort of application Ekamant has now developed ARSFEO.

- ARSFEO will produce an even, flat surface, with a particularly fine finish, which minimises the cost of subsequent surface treatment.
- Used alone, in sequence, or in combination with other products from the WOODLINE series, ARSFEO is a very effective board and panel sanding material.
- The bond system is designed with a high gloss surface, which together with an extra open coat grit distribution minimises clogging problems.
- As the inventor of antistatic abrasive materials, Ekamant continues to develop this technology giving improved antistatic qualities for ARSFEO. Our clear leadership in this field results in even better sanding economy and working environment.

Backing material	F-paper
Type of grains	Silicon carbide
Coating	Extra open
Binder	Resin over resin
Antistatic treatment	Yes
Stearated	No

Item	standard
Narrow belts	Yes
Wide belts	Yes max 1400 mm
Rolls	Yes
Discs	No
Sheets	No

grit sizes
