

RKJ

A flexible sanding tool for profile sanding

The task of the sanding operation is to produce the correct shape, dimension and surface finish to the workpiece before the final surface coating. Although most wood sanding operations can use paper backed products, where strength or flexibility of the backing material is required, cloth products may be specified. For these sort of applications Ekamant has developed a range of excellent cloth backed sanding materials.

- RKJ is a flexible cotton cloth with a close coat of aluminium oxide. It has a resin-over-resin binder specially designed for excellent adhesion of the sanding grains to the backing material. This results in a stable product for less complex profile sanding and edge sanding of all woods.
- RKJ is also particularly suited for sanding with pneumatic drum sander and for hand sanding.
- As for all Ekamant sanding products, an excellent surface finish is a characteristic of RKJ.

Backing material	J-cloth
Type of grains	Aluminium oxide
Coating	Close
Binder	Resin over resin
Antistatic treatment	No
Stearated	No

Items	standard
Narrow belts	Yes
Wide belts	No
Rolls	Yes
Discs	No
Sheets	No
