

# RKJFO

An extra flexible sanding tool for profile sanding of wood.

*The task of the sanding operation is to produce the correct shape, dimension and surface finish to the workpiece before the final surface coating. Although most wood finishing operations can use paper backed products, where strength or flexibility of the backing material is required, cloth products may be specified. For this sort of application Ekamant has developed a range of excellent cloth backed sanding materials.*

- RKJFO is an extra flexible cotton cloth with an open coating of aluminium oxide grain. It has a resin-over-resin binder specially designed for excellent adhesion of the sanding grains to the backing material. The open coat grit distribution reduces clogging problems.
- RKJFO is used for profile, and hand sanding, where a very flexible cloth product is required.
- As for all Ekamant sanding products, an excellent surface finish is a characteristic of RKJFO.

Backing material	JF-cloth
Type of grains	Aluminium oxide
Coating	Open
Binder	Resin over resin
Antistatic treatment	No
Stearated	No

Items	standard
Narrow belts	Yes
Wide belts	No
Rolls	Yes
Discs	No
Sheets	No
